What is this product?

Type

UCITS

Term

The Company is an open-ended fund with no specified maturity date.

Objectives

The Product aims to achieve long term capital growth with lower volatility than a Product which invests solely in equities. The Product is considered to be actively managed, which means that the Investment Manager is not constrained by any index or benchmark in the selection of investments. The Investment Manager has discretion in managing the investments of the Product. The Product seeks to achieve this objective by investment primarily in open ended collective investment schemes which gain exposure to equities (e. g. shares), Fixed Income Securities (with no restriction on the minimum credit rating), property, commodities and currencies. The Product may gain exposure in the range of 20-60% of net assets to equities and long only Products; and will maintain a minimum exposure of 30% to Money Market Instruments, Cash and Products which invest in Fixed Income Securities. Macro considerations will be used in determining the allocation of investments in order to achieve the Product's investment objective. The Advisor will provide advice and recommendations to the Investment Manager as to suitable target Underlying Funds for investment, in accordance with the investment strategy of the Product and based upon the strategic asset allocation views of the Investment Manager. Any income arising from this Share Class will be accumulated. The Product may use a number of simple derivative instruments for investment purposes and/or

efficient portfolio management purposes. Further information on the Product's use of derivatives can be found under the Derivatives section within the Product's Supplement. Although the use of derivatives may give rise to an additional exposure any such additional exposure will not exceed the Product's Net Asset Value.

Intended Retail Investor

This Product is intended for investors who understand the degree of risk, who can tolerate a medium level of volatility and who are able to bear any losses (which may equal the whole amount invested) that may result from an investment in the Product. The Product is designed to form part of a portfolio of investments.

What are the risks and what could I get in return?

Risk Indicator

The risk indicator assumes that you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of the PRIIPs manufacturer to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class.

Due to effects of unusual market conditions, other risks could be triggered, refer to "Risk Considerations" in the Prospectus and Supplement.

This product does not include any protection from future market performance so you could lose some or all of your investment.

If we are not able to pay you what is owed, you could lose your entire investment.

Performance Scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product and a suitable benchmark over the last 10 years. Markets could develop very differently in the future.

The stress scenario shows what you might get back in extreme market circumstances.

The unfavourable scenario occurred for an investment in the benchmark between August 2021 and January 2023.

The moderate scenario occurred for an investment in the benchmark between August 2015 and August 2020.

The favourable scenario occurred for an investment in the benchmark between January 2016 and January 2021.

Recommended holding period: 5 years.

Example Investment: AUD 10,000.

What happens if Pacific Capital Partners Limited is unable to pay out?

You may face a financial loss should the Manufacturer or Depository default on their obligations. There is no compensation or guarantee scheme in place which may offset, all or any of this loss.

What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest and how long you hold the product. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year, you would get back the amount that you invested (0 % annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.

- AUD 10,000 is invested.

	If you exit after 1 year	If you exit after 5 years
Total costs	140 AUD	954 AUD
Annual cost impact (*)	1.4%	1.5% each year

(*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 7.3% before costs and 5.8% after costs.

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.
